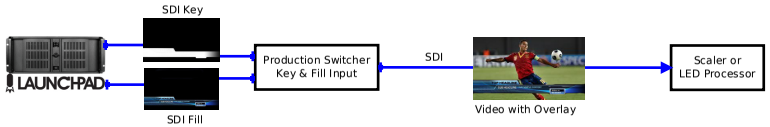
SDI Key&Fill SDI Source Example



In this example, Launchpad is used as an auxillary Key&Fill source to a production switcher

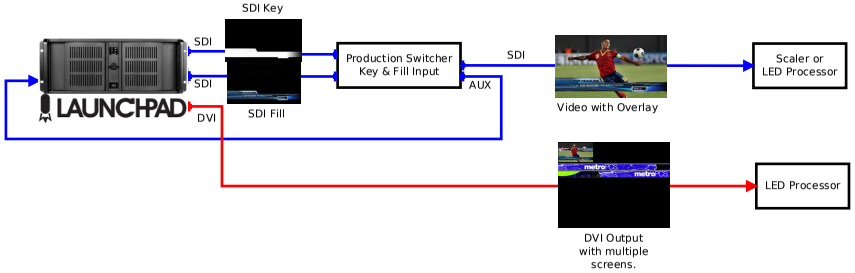
SDI Passthrough Example

In this example, "Program Out" of the switcher is passed through Launchpad.
Keying and graphics alpha blending is done inside Launchpad
NOTE: SDI video signal will Automatically pass-through Launchpad if software or computer is not running

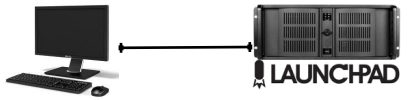
DVI Output Example

In this example, "Program Out" of the switcher is an input Launchpad.
Keying and graphics alpha blending is done inside Launchpad
Final composition is drawn on DVI output.
NOTE: SDI video signal will NOT Automatically pass-through Launchpad if software or computer is not running

Various Combination of SDI and DVI Configurations are possible



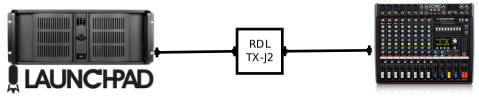
Optional Accessory: KVM



Workstation

Launchpad includes the user workstation LCD.
If additional distance is required OR
multiple workstations,we reccomend the
AVOCENT AUTOVIEW 1415 or 1515

Optional Accessory: Unbalanced Audio Output



Launchpad's native audio output is UNBALANCED STEREO.
If this needs to be converted to BALANCED MONO, we suggest
the RDL TX-J2 Input Transformed

MOTIONROCKET
